FOREWORD

The Missouri Division of Alcohol and Drug Abuse presents this Eleventh Edition of the *Status Report on Missouri's Alcohol and Drug Abuse Problems*.

The Status Report compares state and national rates of alcohol, tobacco, and other drug use. It highlights some of the consequences of substance abuse as reported by various public entities. Trend data and charts illustrate the changes in the magnitude of substance abuse problems during the last several years.

Estimates of the number of Missouri residents needing alcohol and drug abuse treatment services are included, based on recent surveys and studies. The Division of Alcohol and Drug Abuse contracts with substance abuse treatment programs to provide publicly supported services. This report summarizes the characteristics of the clients receiving those services.

Additional information regarding treatment and prevention services is available from the Division's district offices located in Kansas City, St. Louis, and Jefferson City, and the satellite offices in Springfield and Rolla. The addresses and phone numbers for these offices are shown on the map in the appendix of this report.

Inquiries and comments pertaining to the Status Report should be directed to the Division's Research and Statistics unit. The 2002-2005 editions are accessible on the World Wide Web at:

<http://www.dmh.missouri.gov/ada/rpts/status.htm>

Sincerely,

A handwritten signature in black ink, reading "Michael Couty", is positioned below the word "Sincerely,".

Michael Couty

ACKNOWLEDGMENTS

The Missouri Division of Alcohol and Drug Abuse would like to recognize individuals from other agencies who contributed current data for this Eleventh Edition. The Division is grateful for the special programming these administrators and analysts developed to extract the data needed to meet the report's criteria.

INTRODUCTION

The *Status Report on Missouri's Alcohol and Drug Abuse Problems* is issued annually by the Missouri Department of Mental Health, Division of Alcohol and Drug Abuse. The report provides policy makers, planners, funding sources, service providers, and researchers with a set of quantifiable measures on consumption of alcohol, tobacco, and other drugs and the consequences of substance abuse. It also presents estimates of the need for substance abuse treatment and summarizes the services provided by Missouri Division of Alcohol and Drug Abuse (ADA) programs.

Data is provided at several geographic levels. The largest variety of data is available for statewide Missouri. Tables and charts show Missouri trends for the most current year available and several prior years. Survey data compares national and Missouri rates of alcohol, tobacco, and illicit drug use for specific age groups. Substance abuse consequences and treatment data are provided in multi-year statewide tables and three-year tables for the ADA planning regions and service areas. These geographic units are illustrated on the map in the Appendix of this report. Three-year tables are also provided for Missouri's 114 counties and the city of St. Louis, arranged according to federal FIPS county code. In all of the tables, a data element represents a calendar year unless specified as "FY" for state fiscal year (July 1 through June 30) or "FFY" for federal fiscal year (October 1 through September 30). Throughout the report, numerals enclosed in brackets [] in the narratives, charts, and tables correspond to the references listed in the Appendix.

Federal and state laws and enforcement regulations that restrict youth access to tobacco have generated much interest in recent years. One section of the report summarizes the current status of tobacco regulation, merchant education and compliance, and youth tobacco use in Missouri.

PROBLEM OVERVIEW AND ECONOMIC ESTIMATES

Alcohol and drug abuse and addiction have broad negative impacts for society, and additional specific consequences for substance abusers and their families. Everyone is vulnerable to death and injury caused by impaired drivers, alcohol and drug related workplace accidents, and drug related crime. Substance abuse also generates a huge economic cost burden shared by all citizens. A nationwide study estimated that 12.5 percent of Missouri's state government spending in 1998 dealt with problems related to alcohol and drug abuse [49]. Family members of substance abusers experience emotional turmoil, domestic violence, child abuse, exposure to dangerous drugs, separation, and economic deprivation. Substance abusers are at risk for illnesses, injury, death, arrest, incarceration, unemployment, and loss of family.

Alcohol Abuse Costs

The economic costs of alcohol abuse in the United States were an estimated \$184.6 billion in 1998 and rise each year [60]. These costs include loss of productivity due to alcohol related illnesses and deaths, fetal alcohol syndrome, motor vehicle crashes, fire destruction, health care, and research. Some of these costs are financed through taxation, while others are borne individually through higher health and casualty insurance premiums, property damage losses, and lower profits and wages. Missouri's portion of the 1998 cost is conservatively estimated to be \$3.7 billion.

Drug Abuse Costs

Societal drug abuse costs were projected at \$160.7 billion in 2000, and Missouri's share is estimated to be more than \$3.2 billion [77]. As with alcohol abuse, these drug abuse costs are absorbed by governments and individuals. Compared to the alcohol costs, drug costs reflect higher criminal justice expenditures and the prenatal exposure of infants to illicit drugs.

Smoking Costs

The Centers for Disease Control and Prevention (CDC) estimates that, up through 1999, cigarette smoking caused 440,000 premature deaths per year, including 35,000 heart disease deaths attributable to second-hand smoking. Missouri had 9,986 smoking related deaths in 2003 [19]. Smoking related illnesses and deaths result in annual economic losses of \$157 billion nationwide, with an estimated \$3.45 spent on medical costs and a loss of \$3.73 in productivity for each pack of cigarettes consumed [57]. Approximately 800 million packs are sold annually in Missouri [44]. Based on the impact estimates, they create smoking related health and productivity losses of more than \$5.7 billion per year.

CONSUMPTION DATA

Household interviews, telephone surveys, and school surveys are typically used to estimate the prevalence of alcohol, tobacco, and other drug use—the number of people who are using these substances at a defined point in time. These instruments may also include questions and items which identify substance dependence and abuse, particularly when it is important to estimate the number of individuals needing substance abuse services. Standard surveys do not easily reach some groups, such as non-household adults and non-student adolescents. Additional studies or social indicators might be used to augment the estimates to account for these excluded populations.

National Survey on Drug Use and Health

The National Survey on Drug Use and Health (NSDUH) and its predecessor, the National Household Survey on Drug Abuse, are conducted in all states to provide national and state-level data. The table on page 32 presents national trends for adolescents and adults ages 12 and older. Page 33 provides rates for Missouri residents by age group for current use of several drugs, and for beliefs regarding drug use. The state samples have been combined into averaged two-year periods (2000/2001 and 2002/2003) to improve the reliability of the estimates. U.S. rates for the 2002/2003 period are presented for comparison with the state rates [67, 68, 69]. Some of the survey results are discussed below and in other sections of this report.

Alcohol: Among the population of adolescents and adults age 12 and older, Missouri's estimated percentage of current drinkers (those consuming alcohol within 30 days prior to the survey) increased from 46.7 percent in 2000/2001 to 53.2 percent in 2002/2003, compared to 50.5 percent nationally. Binge drinking—defined in the NSDUH as consuming at least five drinks on a single drinking occasion at least once in the preceding 30 days—increased from 20.0 percent to 24.6 percent, also higher than the U.S. rate of 22.8 percent. Among adolescents 12-17 years of age, current alcohol use increased from 18.0 percent in 2000/2001 to 19.7 percent in 2002/2003, somewhat higher than the 2002/2003 national rate of 17.7 percent. Binge drinking among Missouri adolescents was 12.6 percent in 2002/2003 compared to the U.S. rate of 10.7 percent. Current alcohol use among young adults in the 18-25 age group increased in Missouri from 59.7 percent to 64.5 percent. Nationally, current alcohol use in this age group was 60.9 percent in 2002/2003. Binge drinking among young adults in Missouri also increased, climbing from 38.8 percent in 2000/2001 to 43.9 percent in 2002/2003 and surpassing the U.S. rate of 41.3 percent. Among Missouri's population over age 25, current alcohol use increased from 48.4 percent in 2000/2001 to 55.9 percent in 2002/2003, also exceeding the national rate of 53.2 percent. Binge drinking in this age group increased in Missouri from 17.9 percent to 22.8 percent, compared to 21.2 percent nationwide.

Marijuana: According to the NSDUH, Missouri has a higher overall rate of current marijuana use than the national rate of 6.2 percent, increasing from 4.4 percent in 2000/2001 to 6.8 percent in 2002/2003. Marijuana use remained virtually unchanged for Missouri's adolescent

population at 7.4 percent—lower than the national rate of 8.0 percent. However, marijuana use increased from 13.0 percent in 2000/2001 to 18.6 percent in 2002/2003 among Missouri's young adults 18-25 years of age, compared to 17.9 percent nationally. Marijuana use in the 26 and older age group increased in Missouri from 2.6 percent to 4.6 percent.

Tobacco: Current use of any tobacco product increased among all age groups in Missouri, involving 36.7 percent of adolescents and adults 12 years of age and older in 2002/2003. This rate was considerably higher than the national rate of 30.1 percent during the same time period. Among Missouri adolescents 12-17 years of age, current use of tobacco increased from 17.2 percent in 2000/2001 to 21.0 percent in 2002/2003, also much higher than the national rate of 14.8 percent. Cigarette smoking comprised most of the adolescent tobacco use and increased from 14.2 percent to 17.9 percent. Among U.S. adolescents, current cigarette smoking decreased from 13.3 percent in 2000/2001 to 12.6 percent in 2002/2003. Tobacco use by Missouri young adults 18-25 years of age increased from 49.1 percent to 51.8 percent, while nationally tobacco use in this age group increased from 43.4 percent in 2000/2001 to 45.0 percent in 2002/2003. Among Missouri adults age 26 and older, tobacco use increased to 36.2 percent and approximated the overall Missouri rate. Based on the NSDUH, 30.6 percent of Missouri's adolescents and adults were current cigarette smokers in 2002/2003, compared to 25.0 percent nationally.

Monitoring the Future Survey

Monitoring The Future (MTF) is a national annual survey of students in grades 8, 10, and 12, college students, and young adults 19-28 years of age. National data from these surveys is provided in the tables on pages 34-37 [2, 3]. Although Missouri subsets of the MTF are not available for comparison, similar Missouri data is available from three sources—the Youth Risk Behavior Survey (YRBS), the Missouri Student Survey, and the Core Institute Survey. The YRBS is part of a surveillance system of the Centers for Disease Control and Prevention (CDC). It is administered nationally and in Missouri in odd-numbered years to students in grades 9-12 [9]. The Missouri Student Survey is conducted in even-numbered years for students in grades 6, 8, 10, and 12. The most recent prevalence data from these surveys is summarized on page 42 [47, 53]. Results from the 2004 Missouri Student Survey are expected in mid-2005. The Core Institute Survey is administered at 12 Missouri public universities and colleges. Among its measures, the survey collects data on student binge drinking. Consistent with MTF, the Core Institute survey defines current binge drinking as consuming at least five alcoholic drinks on a single occasion at least once during the two weeks preceding the survey. Binge drinking was reported by one-half (49.9 percent) of the college students surveyed in Missouri in 2004, compared to 48.2 percent in 2003 [78].

Other Consumption Data

The YRBS also questions students on their first use of alcohol, tobacco, and marijuana before age 13. In 2003, 28.6 percent of high school males and 21.7 percent of high school females indicated they drank alcohol before age 13, compared to 32.0 percent of males and 23.3 percent of females nationwide. Missouri and U.S. high school students had similar rates for initiating tobacco and marijuana use. Twelve percent of Missouri males and 7.9 percent of females in grades 9-12 said they tried marijuana before age 13. Early smoking rates were 20.6 percent for males and 19.7 percent for females.

Based on alcohol sales, consumption of alcohol among the Missouri population age 14 and older reached its highest per capita amount since 1981. Missouri residents consumed an average of 2.39 gallons of ethanol (absolute alcohol) in 2002, compared to the national average of 2.20 gallons. Previously, Missouri's alcohol consumption reached 2.45 gallons per capita in 1981 before declining through the 1980's and 1990's [59].

CONSEQUENCES DATA

Health

Prenatal alcohol, tobacco, and drug exposure can cause low birth weight, newborn addiction, serious birth defects, mental retardation, and lifelong impairments. This report includes medical conditions of newborns identified on birth certificates using a check-box system and hospital data on maternal drug exposure using International Classification of Diseases (ICD) coding developed by the World Health Organization. The use of alcohol and harmful drugs by pregnant women is known to be substantially under-reported. Hospital and emergency department data is coded in ICD-9. Some communicable diseases are reportable under Missouri law. Hepatitis-B, hepatitis-C, tuberculosis, and HIV/AIDS are among the communicable diseases sometimes acquired from substance abuse. Alcohol, tobacco, and drug related deaths are attribution estimates derived from mortality data using ICD-10 codes.

Reported substance abuse during pregnancy declined in 2003 [21]. The reported number of mothers of newborns who drank during their pregnancies decreased from 517 in 2002 to 464 in 2003. Studies confirm that alcohol use during pregnancy is under-reported, but the number of documented cases has decreased dramatically since the 1980's. The Division of Alcohol and Drug Abuse admits pregnant women into treatment programs on a priority basis in accordance with federal requirements. Among the 13,301 women served during fiscal year 2004, 407 were pregnant when admitted to treatment [26, 27]. Women who received their substance abuse treatment in CSTAR Women and Children programs had 85 births during treatment, and 83 of these babies were born drug-free. Little progress has been made in recent years in reducing the number of mothers of newborns who smoke cigarettes during their pregnancies. In 2003, 13,895 births to women who smoked were reported, an increase from the 13,607 reported in 2002. However, the rate remained unchanged at 18.1 percent of births [21]. The National Institute on Drug Abuse estimates that 60 percent of Hepatitis C cases have resulted from injection drug use, with many of the exposures originating in earlier years [61]. In 2003, Missouri had 3,071 reported cases of Hepatitis C compared to 1,400 in 2002. Hepatitis B cases increased from 135 in 2002 to 339 in 2003 [23]. Deaths with an underlying cause of drug abuse increased substantially from 454 in 2002 to 561 in 2003. Alcohol related deaths remained virtually unchanged, with 328 estimated for 2003 [14].

Crime and Public Safety

Substance abuse significantly impacts law enforcement and criminal justice systems. More than one-half of the economic costs of substance abuse are related to crime [62]. Victims of violence are more likely to be seriously injured if their perpetrators have consumed alcohol and/or other drugs [75]. Missouri ranked sixteenth among all states in the violent crime rate in 2003 [76]. One-half of the aggressors in domestic violence incidents are believed to be alcohol or drug addicted, and an estimated 80 percent of child abuse cases involve parental substance abuse [64]. Under Missouri law, domestic violence cases are reportable by all police departments to the Highway Patrol. Child abuse and a variety of other offenses involving minors are reported by the juvenile courts. The data include removal of children from their homes resulting from their parents' abuse of alcohol or other drugs [45, 46]. The manufacturing of methamphetamine in the home creates an especially hazardous environment. Confiscated methamphetamine labs, chemicals, and equipment are reported to the Drug Enforcement Administration's El Paso Information Center [35]. Missouri traffic crashes are categorized according to whether they resulted in fatalities, injuries, or property damage and whether there was the presence of conditions that are known to contribute to their occurrence, including alcohol or drug involvement. Arrests for driving under the influence of alcohol or drugs, and arrests for other drug offenses, are included in the data. Reports from the Department of Corrections show that drug offenders and persistent DUI/DWI offenders comprise a large portion of incarcerations and probation/parole cases.

Missouri had 37,430 arrests in 2003 for driving under the influence of alcohol or drugs, compared to 39,932 DWI/DUI arrests in 2002. Overall drug arrests increased from 41,757 in 2002 to 42,839 in 2003, but arrests for manufacturing/sale of drugs decreased from 8,010 to 7,313 [34]. Missouri law enforcement agencies made 2,860 seizures of methamphetamine labs, chemicals, equipment, and dumpsites—the most in the nation [35]. In 2002, 2,749 labs and equipment were confiscated in the state. Alcohol related traffic crashes decreased from 8,478 in 2002 to 8,081 in 2003. Fatal crashes attributed to alcohol intoxication also decreased [37]. The 249 fatal alcohol related crashes in 2003 resulted in 277 deaths [40]. Drug related crashes continued to increase, reaching 925 in 2003 [38]. Thirty-seven deaths were attributed to 32 fatal drug related crashes [41]. Prison admissions for drug offenses increased from 5,861 in fiscal year 2003 to 6,171 in fiscal year 2004. Incarcerations for driving while intoxicated decreased from 1,193 in fiscal year 2003 to 1,106 in fiscal year 2004 [4]. Probation and parole openings for drug offenses increased from 11,996 in fiscal year 2003 to 12,890 in fiscal year 2004, but openings for DWI offenses decreased sharply from 2,703 in fiscal year 2003 to 2,076 in fiscal year 2004 [5].

Causal and Correlate Factors

Aside from direct consequences, data is also collected on conditions that contribute to substance abuse or that frequently co-occur with substance abuse. These include accessibility of alcohol, tobacco, and illicit drugs; perceptions of harm from their use; school dropouts; unemployment; and poverty. Vocational rehabilitation admissions in this report identify the number of substance abuse treatment clients who also received vocational education and training. The table on page 33 indicates that smaller percentages of Missouri residents perceive great risk in abusing alcohol, tobacco, and marijuana than do individuals nationwide.

SUBSTANCE ABUSE AND NEED FOR TREATMENT

Criteria for identifying substance dependence and abuse are specified in the *Diagnostic and Statistical Manual of Mental Disorders, 4th Edition*. Using combined 2002 and 2003 data, the National Survey on Drug Use and Health (NSDUH) indicates that 9.2 percent of the U.S. population and 9.6 percent of the Missouri population age 12 and older are dependent on or have abused alcohol or illicit drugs in the past year. In Missouri, the young adult age group of 18-25 has an abuse/dependency rate of 23.7 percent, compared to 21.4 percent nationally. The survey also finds that 8.8 percent of the U.S. population age 18 and older—and 10.4 percent of the Missouri population in this age group—have a serious mental illness [69]. An estimated one-fifth of individuals with mental illness have a co-occurring substance abuse problem [71].

A Missouri treatment needs assessment completed by Research Triangle Institute (RTI) in 2003 estimated that 491,223 Missouri residents—461,845 adults and 29,378 adolescents—needed treatment due to their substance abuse or dependency [51, 52]. The tables on pages 44-45 provide demographic detail about this population. The RTI study found that thousands more needed some form of less intensive intervention. The estimated number needing treatment comprises 10.5 percent of the Missouri population age 12 and older and is fairly consistent with the 9.6 percent identified with dependence or abuse in the National Survey on Drug Use and Health.

TREATMENT BARRIERS AND BENEFITS

Barriers to Treatment

Substance abuse treatment is unaffordable for the disproportionate number of people needing treatment who have low incomes or lack insurance coverage. In 1999, clients in 64 percent of substance abuse treatment admissions nationwide had no health insurance coverage for alcohol and drug abuse treatment and relied on public support. Medicaid provided treatment for an additional 14 percent of clients [66]. A 2003 federal survey of Missouri treatment programs found that 80.8 percent of the clients were treated in private non-profit programs that utilize state and federal funds, while only 16.5 percent received services in private for-profit facilities [70]. By applying this percentage to the state's treatment needs estimates cited earlier, it is expected that 373,171 Missouri adults and 23,737 adolescents would need to access treatment programs administered by the Division of Alcohol and Drug Abuse. In fiscal year 2004, these programs provided treatment to 31,287 adults and 4,946 adolescents [26, 27], only 8.4 percent of the adults and 20.8 percent of the adolescents needing state-supported services. This data suggests that approximately 341,884 adults and 18,791 adolescents—for a total of 360,675 Missouri residents—might have an unmet need for publicly supported treatment. These findings are substantiated by data from the National Survey on Drug Use and Health cited earlier [69]. That study estimated that 7.63 percent of Missouri residents age 12 and older needed but did not receive alcohol treatment in 2003, an unmet need of 356,629. Also, 2.78 percent of this age group or 129,938 had an unmet need for illicit drug treatment. There is some overlap between these two groups because some individuals needed both alcohol and illicit drug treatment.

Treatment Outcomes

Treatment for substance abuse has a good success rate. In 2002, Missouri completed the Treatment Outcomes Performance Pilot Studies Enhancement (TOPPS-II), a federally-funded study of clients receiving treatment in programs administered by the Division of Alcohol and Drug Abuse [48]. Follow-up studies were conducted on samples of clients six months and twelve months after entering treatment. The data identified several positive treatment outcomes. One-half of the clients were alcohol-free and drug-free at both follow-up sessions and more than two-thirds of the clients were abstinent one year after entering treatment. Clients showed improvement in the areas of earned income, physical and mental health, family and social relations, and legal status.

Aside from these and other quality-of-life benefits of substance abuse treatment, virtually all economic studies have shown that treatment is a good financial investment [64, 65]. Treatment reduces some of the direct cost burden identified on pages 10-11 associated with health care, law enforcement, criminal justice, corrections, public safety, property damage, and insurance. It also reduces productivity losses due to illness, crime, and injuries—and lost future earnings resulting from premature deaths. The RTI needs assessment study identified on page 14 estimated that 491,223 Missouri residents need treatment in public or private programs. The societal cost estimates for alcohol and other drug abuse in the United States, described on page 10, are \$345.3 billion [60, 77]. Missouri's cost burden based on population portion is \$6.9 billion—over \$14,000 for each untreated substance abuser. Yet Missouri's average expenditure to provide substance abuse treatment was only \$1,330 per client in fiscal year 2004 [27]. Based on the percentage of clients in the TOPPS-II study who achieved complete abstinence, it is expected that investment in substance abuse treatment in Missouri yields an economic benefit/cost ratio of at least seven-to-one.

SERVICES OF THE DIVISION OF ALCOHOL AND DRUG ABUSE

The Division of Alcohol and Drug Abuse supports an array of prevention, intervention, and treatment services. In the state fiscal year 2004 (July 1, 2003 through June 30, 2004), the Division of Alcohol and Drug Abuse contracted with service providers for substance abuse prevention, detoxification, residential and outpatient treatment, compulsive gambling counseling, and traffic offender services. Major funding sources for these programs are from federal Substance Abuse Prevention and Treatment block grant funds, federal Safe and Drug-Free Schools and Communities Act funds, federal and state Medicaid payments, Missouri general revenue, Compulsive Gambling funds, and Health Initiative funds.

Prevention Services

The Division maintains a comprehensive prevention system based on a risk and protective factor framework. The Division's two strategic goals for prevention are (1) delaying onset of substance use and (2) reducing the incidence and prevalence of binge drinking among college-age youth. The Division's focus for prevention includes implementing an array of evidence-based programs in public schools and communities, building the capacity of coalitions to address local substance use issues, and building the capacity of communities to address underage purchase and consumption of alcohol beverages. The prevention system includes contracted services for coalition capacity building, community-based alternatives and services for high-risk youth, school-based prevention and intervention services, services to reduce and prevent development of alcohol related neurological disorders, tobacco retailer education activities, and support for enforcing underage drinking laws. In addition, the Division partners with other state agencies to provide a continuum of prevention services throughout the state.

Treatment, SATOP, Compulsive Gambling, and Housing Services

The Division administers treatment services through contracts with a network of specialized programs. The services are provided to individuals who abuse or are dependent on alcohol or other drugs, to their family members who are adversely affected, and to compulsive gamblers. In fiscal year 2004, 15,440 individuals were served in Comprehensive Substance Treatment and Rehabilitation (CSTAR) programs; 22,356 in primary recovery programs; 1,172 in methadone programs; 34,524 in Substance Abuse Traffic Offender Programs (SATOP); and 357 in compulsive gambling programs [26, 27]. The CSTAR model provides intensive outpatient treatment and has programs tailored for specific populations. In fiscal year 2004, 7,110 individuals were served in CSTAR Women and Children programs, 3,426 in CSTAR Adolescent programs, and 5,288 in CSTAR General Population programs. Individuals are referred to SATOP stemming from an arrest for driving under the influence of alcohol or other drugs. SATOP provided education services to 16,769; Weekend Intervention Services to 6,556; Clinical Intervention Services to 5,012; Serious and Repeat Offender Services to 179; and assessments without additional services to 6,008.

New admissions and readmissions in fiscal year 2004 totaled 38,968, and the remaining 70,729 individuals identified above who received treatment, SATOP, or compulsive gambling services were already in treatment at the beginning of the fiscal year. The 38,968 admissions included 36,878 for substance abuse or dependency treatment; 1,831 codependency admissions for people adversely affected by a family member's alcohol or drug problem; and 259 whose primary problem was compulsive gambling. The clinical data presented throughout this report summarizes the 36,878 client admissions for treatment of substance abuse or dependency. Stable, affordable, drug-free housing is an important component of recovery for some clients after they attain sobriety. The Division coordinates 60 self-run, self-supported Oxford Houses for clients who have completed treatment. There are 48 houses for men and 12 for women, with a total capacity of 371 residents.

TREATMENT TRENDS

Treatment Admissions

Admissions to Division of Alcohol and Drug Abuse programs for substance abuse and addiction treatment totaled 36,878 in fiscal year 2004, a decrease from the 38,266 admissions in fiscal year 2003 and the peak 39,912 admissions in fiscal year 2001 [26].

Gender

Males accounted for two-thirds of treatment admissions, and females one-third. The number of treatment admissions for pregnant women increased from 369 in fiscal year 2003 to 400 in fiscal year 2004. A total of 85 babies were born to women served in the CSTAR Women and Children programs, and 83 were documented to be healthy and drug-free at birth.

Race/Ethnicity

While treatment admissions for Caucasians, African Americans, Native Americans/Alaskans, and Asians declined from fiscal year 2003, treatment admissions for Hispanics reached 311 in fiscal year 2004. Treatment clients averaged 33.4 years of age.

Education and Employment

Only 30 percent of the clients entering treatment during fiscal year 2004 were employed. Among the adults over age 18, 35 percent did not have a high school diploma, 46 percent completed high school, 15 percent had some college education, and four percent had a college degree.

Referral Sources

Admissions among clients with three or more arrests within the last two years continued to climb, reaching 17,059 in fiscal year 2004 and 47 percent of all treatment admissions. Criminal justice referrals accounted for 15,159 treatment admissions. Clients who did not identify an external referral source—and those encouraged to seek treatment by family or friends—accounted for 11,769 admissions. Mental health providers were the origin of 5,456 treatment referrals and healthcare providers were the source of 1,106. Referrals from schools increased to 202 in fiscal year 2004, higher than in any previous year.

Injection Drug Use

Admissions for injection drug users totaled 3,319 in fiscal year 2004, a small increase from the 3,299 admissions in fiscal year 2003. Although 36 percent injected drugs daily, 46 percent reported injecting drugs less than once per week.

Primary Drugs of Abuse

Alcohol continued to lead treatment admissions, accounting for 14,288 in fiscal year 2004 for primary drug of abuse. Marijuana admissions remained second with 9,492. Cocaine was identified as the primary drug problem in 6,261 admissions, with crack cocaine accounting for 82 percent of them. Methamphetamine admissions ranked fourth but increased to 3,910 and, for the first time, accounted for more than ten percent of treatment admissions. Heroin remained the fifth most frequently mentioned primary drug of abuse with 1,325 admissions, slightly fewer than the 1,362 heroin admissions in fiscal year 2003. Admissions for other narcotics and analgesics increased from 590 in fiscal year 2003 to 703 in fiscal year 2004. Treatment admissions for hallucinogens—principally phencyclidine (PCP)—decreased from 347 in fiscal year 2003 to 299 in fiscal year 2004. Admissions for other illicit drugs, prescription medications, and over-the-counter medications decreased from 138 in fiscal year 2003 to 127 in fiscal year 2004.

YOUTH AND TOBACCO IN MISSOURI

Youth Tobacco Access and Possession Laws

- No Tobacco Sales to Persons under Age 18: Missouri state law prohibits the selling of tobacco products to anyone under the age of 18 years. Merchants are also required to post a state law sign at every tobacco display, including cigarette machines. (RSMO 407.926-407.927)
- State Law Enforcement: The Department of Public Safety, Division of Alcohol and Tobacco Control has the authority to enforce the state's laws related to the control and sale of tobacco. (RSMO 407.934)
- Vending Machines: As of January 1, 2002, vending machines are required to be located within employee's line of sight or be equipped with a locking device. Vending machines located in areas where patrons must be over the age of 18 or in places not generally accessible to the general public are exempt from this requirement. (RSMO 407.931)
- Minor Possession: No person under the age of 18 shall purchase, attempt to purchase, or possess tobacco products unless in the course of employment. Persons under the age of 18 will have their tobacco products confiscated. (RSMO 407.933)
- Tobacco Registry: The Department of Revenue is required to establish and maintain a listing of establishments that sell tobacco products in the state. (RSMO 407.934)
- Federal Regulation: Federal Synar regulation, administered by the U.S. Department of Health and Human Services, requires all states to establish laws that make it unlawful to sell or distribute tobacco products to any individual under the age of 18 years and to enforce such laws in a manner that can reasonably be expected to reduce youth access to tobacco products. It also requires states to annually measure compliance through random, unannounced inspections. All states are expected to achieve a violation rate of no more than 20 percent. (42 U.S.C. 300x-26 and 45 C.F.R. 96.130)

Current Status of Tobacco Use and Merchant Compliance

- Youth Lifetime Use: In 2003, nearly 67 percent of Missouri high school students surveyed reported that they had tried cigarette smoking – down from the 76.7 percent reporting lifetime use in 2001 but still higher than the 2003 national average of 53.7 percent. The next Missouri high school Youth Risk Behavior Survey is scheduled for 2005 [2, 9].
- Youth Current Use: In 2003, 21.4 percent of Missouri high school seniors reported current use of cigarettes—down significantly from 35.4 percent in 2001. While during most of the 1990's Missouri's rate of high school senior smokers was higher than the corresponding national average, the most recent rate reported for the state falls below the 2003 national average of 24.4 percent.

- **Merchant Compliance:** In 2004, an estimated 11.5 percent of Missouri merchants unlawfully sold cigarettes and smokeless tobacco to individuals under the age of 18 years—up somewhat from the previous year's rate of 8.9 percent. For the past five years, the State has realized a non-compliance rate below the long-term Synar target rate of 20%. The State has used a combination of law enforcement and merchant education activities in order to bring down the non-compliance rate from a high of 40 percent (baseline year) to a rate less than the 20 percent target rate [25].

State Initiatives Aimed at Youth Tobacco Access

- **Law Enforcement Surveillance:** The Division of Alcohol and Tobacco Control (DATC) has 33 field agents to enforce both alcohol and tobacco laws. Citizen or local law enforcement complaints initiate surveillance investigations. Between October 2003 and August 2004, five arrests were made for violations of Sale of Tobacco to Minors (407.931.3) and 20 arrests were made for violations of Possession or Attempt to Purchase Tobacco by Minors (407.933.1). DATC also provides server training covering alcohol and tobacco laws to all interested retailers. During the same time period, DATC conducted 112 server trainings in which 2,123 individuals were trained.
- **Merchant Education Program:** The Division of Alcohol and Drug Abuse (ADA) continues to conduct a comprehensive merchant education program that includes outlet educational visits, compliance checks, and feedback to clerks and owners/managers [25].

Educational visits to tobacco outlets are made to provide merchants with information regarding the state's laws on youth access to tobacco products. From April through June 2004, the prevention teams conducted walk-in visits to tobacco retailers in the state. These retailers generally received three visits during this time period. Informational brochures, tobacco signs, and calendars were given to store employees. In total, 16,150 walk-in visits were conducted in which contact was made with the store owner, manager, and/or other employees. Nearly 5,800 outlets received at least one visit.

Compliance checks are conducted in which a youth age 16 or 17 attempts to purchase a tobacco product. If the mode of purchase is over-the-counter, the event is considered a successful unconsummated buy if the retail clerk fails to request ID or the age of the youth prior to requesting payment for the tobacco product and fails to refuse the sale. If the mode of purchase is vending machine, the event is considered a successful unconsummated buy if the youth is able to insert a quarter into the vending machine and leave the premises without intervention by store employees whereby they request ID or the age of the youth. During these checks, the youth inspectors purchase no tobacco products. If the check results in a successful (unconsummated) buy, the clerk receives a caution card. The check is followed-up by a caution letter to the owner/manager generally within two weeks of the check. If the store employee refuses the sale, the store employee is given a congratulatory card. These checks are followed up with a congratulatory letter to the owner/manager of the retail establishment. Between August 2003 and July 2004, there were 3,895 checks (including Synar checks), with 451 (11.58%) resulting in the issuance of caution cards.

Beginning in 1999, data are not directly comparable to earlier years due to use of a computer-assisted instrument that replaced the paper-and-pencil surveys.

* "Binge" alcohol use in the National Household Survey is defined as consuming 5 or more drinks on the same occasion on at least one day in the past 30 days

** "Heavy" alcohol use is defined as consuming 5 or more drinks on the same occasion on each of 5 or more days in the past 30 days.

*** Beginning in 1999, these data are not comparable to previous years due to ICD-10 implementation which changed rules for selecting and classifying causes of death.

**** Due to changes in estimation methodology, smoking related death estimates for all years have been revised from previous report.

Meth Labs Seized, DEA **				107	236	410	415	250

* Due to implementation of federal Uniform Crime Reporting in 2001, data totals in these categories are not comparable to pre-2001 totals.

** Prior to calendar year 2001, some lab seizure counts were duplicated due to participation and reporting by multiple law enforcement agencies, including the Department of Public Safety's Drug Task Forces, Missouri State Highway Patrol, and the federal Drug Enforcement Administration. Beginning in 2001 with Uniform Crime Reporting, each lab seizure, chemical or equipment seizure, and dumpsite clean-up are counted once.

** SATOP clients referred to Clinical Intervention Services (CIP) and Youth Clinical Intervention Services (YCIP) are also quantified under Treatment Program Admissions.

*** In this table, client admission counts are unduplicated by client state identification number and facility code and represent the number of clients admitted to each facility.

Statewide, regional, county, and category totals may not match due to non-inclusive categories, incomplete data, and services to Missouri non-residents.
